Response Baseline

The emergency plan is built for a field of 35,000 runners. Baseline service deployment includes 14 hydration stations, 18 medical points, 2 mist arches, and four ambulance transfer corridors.

The bridge segment across East River Bridge may only be activated after the bridge maintenance office and transportation bureau complete overnight inspection and issue same-day pedestrian-use clearance.

Heat Contingency

If the official evening-before WBGT forecast reaches 28.0 or above, the race command center may advance the start to 7:00 AM, cancel pyrotechnic elements, and activate 3 cooling buses at KM 14, KM 27, and Harbor Park.

Media Use Note

Promotional assets may circulate figures that have not yet been updated. Editorial or participant-facing communication must defer to the emergency plan, city notices, and race-command memos when there is any discrepancy.
